YOUR LEARNING PATH

Your Study Path

Your journey starts here

01 Choose your semester
Follow your academic structure

02 Select a subject
Explore units and topics

03 Pick a topic
Prepare before your lecture

04 Learn & revise
Access everything in one place

Why StudyMap?

Your syllabus shouldn't feel scattered. StudyMap brings your subjects, topics and learning resources into one clear study path.

The problem students face

Studying becomes difficult when you don't know what to study, where to find it or what comes next.

01

Information is scattered

02

You don't always know what's next

03

Revision becomes harder

YOUR ACADEMIC ROADMAP

Follow the syllabus. Know your path.

Select your semester to explore your subjects, units and topics. StudyMap keeps your learning journey organised around your syllabus.

Currently viewing Semester 01

Semester 01 Subjects

Choose a subject to explore its complete learning roadmap.

SUBJECT 01

Programming

Learn programming concepts, logic, functions and problem solving step by step.

Unit 01 Unit 02 Unit 03 Unit 04

Progress: 18%

View Subject →

SUBJECT 02

Mathematics

Organise mathematical concepts, formulas and problem-solving topics.

Unit 01 Unit 02 Unit 03 Unit 04

Progress: 10%

View Subject →

SUBJECT 03

Computer Fundamentals

Understand the basic concepts of computers, hardware, software and operating systems.

Unit 01 Unit 02 Unit 03 Unit 04

SUBJECT 04

Web Technology

Explore web page structure, styling, scripting and basic web development.

Unit 01 Unit 02 Unit 03 Unit 04

Progress: 5%

SEMESTER 01

Programming

Follow the complete subject roadmap and learn topic by topic.

4 Units | 16 Topics | 18% Completed

Subject Roadmap

Explore each unit and choose a topic to begin learning.

UNIT 01

Programming Basics

Understand the basic concepts of programming.

30%

Introduction to Programming →

UNIT 01 | PROGRAMMING

Variables and Data Types

Understand how information is stored in a program and how different types of data are represented.

⏱ 20 min | Beginner | 1 Practice Set

Before Class

Get a quick understanding of the topic before it is discussed in your lecture.

- What is a variable?
- What is data?
- Why do we need data types?

Your Progress

Topic progress: 40%

Topic Sections

📋 Instructions

1. Read each question carefully.
2. Select one answer for every question.
3. Click **Check Answers** after completing the quiz.
4. Your score will be displayed at the end.

1. What is a variable?

- ○ A programming language
- ○ A named location used to store a value
- ○ A type of computer
- ○ A software application

Your Subjects

Programming

Learn programming concepts, functions and problem solving.

Progress 35%

Mathematics

Follow your syllabus and revise important concepts.

Progress 20%

Computer Fundamentals

Understand the basic concepts behind computer systems.

Progress 30%

📈 My Progress

Keep track of what you have studied, what you are currently learning and what is still left to complete.

Overall Progress

You have completed **42%** of your current study plan.

12 Topics Completed 42%

💻 Programming

📐 Mathematics

Scattered Material

Study material can be spread across textbooks, Classroom, messages, PDFs and different websites.

Unclear Study Path

Students may not always know which topic they should study next according to their syllabus.

Last-Minute Preparation

Without an organized study path, students may end up preparing topics only before examinations.

How StudyMap Works

01

Choose Semester

Select your current semester.

02

Select Subject

Choose the subject you want to study.

03

Select Topic

Follow the topics according to the syllabus.

04

Learn & Practice

Read resources, revise and practice.

UNIT 01 • PROGRAMMING

Learning Resources

Everything you need for Variables and Data Types, organized in one place.

5-MINUTE REVISION

Variables and Data Types

A quick revision sheet containing the most important concepts, definitions and examples you should remember before a test or exam.

📌 1. Variable

A variable is a named location used to store a value in a program.

> **Remember:**
>
> Variable = Name + Stored Value

📊 2. Data Type

A data type specifies the kind of value that a variable can store.

- Integer → Whole numbers
- Float → Decimal numbers
- String → Text
- Boolean → True or False
